

## **Who is the Inspire Customer**

Inspire is perfect for small to medium companies. Large companies that want a lean, simple LCMS solution will benefit from Inspire as well.

## **Do you fit into one of these scenarios?**

- You have stand-up or classroom training and want to convert to e-learning.
- You want an easier, more efficient way to track learning effectiveness.
- Distance and time constraints make training costly and inconvenient
- You want to develop or maintain an e-learning system and save money doing it.

Inspire LCMS was created by Rivertown Communications to facilitate the rapid development and delivery of multiple-module e-learning systems.

Using Inspire input tools, multiple developers can create and simultaneously import illustrations, photos, audio, video, interactions and textual content.

The Learning Management System (LMS) integrates seamlessly with the Inspire system and handles all learner's tracking and course management tasks.

Learner progress for both online and classroom courses can be tracked. Multiple report options allow administrative staff to view and monitor learner progress.

Inspire LCMS is the single source solution for all your learning and content management training needs.
